

Data and Power Rail

The Jarvis Power and Data Rail provides distributed hardwired power and data for open-office floor plans. The casing, designed and manufactured by Fully, allows the feet of the power beam to fit comfortably with each Jarvis desk. A local electrician is required to install and our Workplace Solutions team will help provide support during this process. All electrical components are made to order in America by Byrne using an 8-trac system.

Specs

- Available widths: 48"x30" and 60"x30"
